### Abstract

Ecological hotels are those that use green best practices in maintenance, services, logistics, goods, and supplies to considerably reduce their environmental effect. Hotels all around the world are implementing green measures, including smart bathrooms, solar power systems, and garbage diversion. Reducing energy and water consumption housekeeping and room service, are all part of moving toward sustainability. There are numerous hotels, ranging from the most basic to the most luxurious, are making efforts to improve their practices. As a result, the goals of this article are to: describe the features of sustainable practices in hotels, ii) investigate the many strategies for enhanced practices, and study the key procedures of sustainable practices. The research framework focuses on efforts that will improve awareness and sustainable development. The findings of this study will educate, motivate, and raise awareness among large and micro hotel company owners about the importance of working together to achieve sustainability.
